Product profile

Ives rescue hardware

As professionals in the healthcare sector care for patients of all ages and ailments, they sometimes encounter situations where a patient has become incapacitated and trapped in a small room. Rescue hardware from Ives solves that problem.

Rescue hardware used in conjunction with center hung pivots ensures a door can be accessed by allowing the door to swing the other way. Basically, it acts like a door jamb and swings in one primary direction in normal use. In an emergency situation, it depresses the center tong and allows the door to move in the opposite direction without damaging the frame.

Used on patient room restrooms, utility closets and small spaces in hospitals, institutions, and convalescent homes, rescue hardware is composed of:

- Rescue strike
- Emergency stop
- Emergency stop strikes
- Emergency stop assemblies

Features:

- Stainless finishes
- Center or offset mounting styles
- 2 frame width options
- Used in conjunction with center hung pivots
