

CardTrax™

Credential sequencing program

Elevate your credential management without adding cost through the Schlage CardTrax™ Credential Sequencing Program. We keep track of the information that is encoded on each card so badge ID numbers are never duplicated. Standard CardTrax (CT) Accounts are available to all customers who purchase Schlage credentials. Restricted CardTrax Accounts¹ are reserved for customers who purchase in larger volumes.

Why use CardTrax instead of managing badge properties yourself from order to order? CardTrax provides the following advantages:

- **Avoid card ordering mistakes** – You'll eliminate potential errors or order duplication from other offices and facilities in your organization. We'll keep track of the next badge ID number you need to assign to your next card order.
- **Flexibility** – You can order your cards through the same provider or a different provider each time - either way we'll always know what facility code, encryption key, and bit format to assign your cards in addition to the next-in-line Badge ID number to avoid duplication.

- **No upcharges** – Other card providers often charge additional fees for card tracking services. We don't.
- **Compatible with HID® Corporate 1000™** - Our credential sequencing program fulfills orders for both 35C and 40X bit formats¹. Any 125 kHz Prox credentials that were previously enrolled in the HID Corporate 1000 program are compatible with the Schlage CardTrax program; at no additional charge.
- **Exclusive badge config** – Restricted CardTrax accounts ensure your facility code and badge ID range is unique to your site and never applied to any other cards we make¹.
- **Added security** – Pair your CT account with the Schlage Custom Encryption Key Service (SCEKS) for maximum security. Ask your Allegion consultant for more information.

¹ Restricted CardTrax Accounts are reserved exclusively for end user customers, and have a minimum annual quantity requirement of 2,000 credentials or 10 orders per year.

Note: Standard CardTrax Accounts (most popular) are available to end user customers, integrator partners, or other business partners, both new and existing.
