

Getting to know the New Allegion Library

Allegion has over 10,000+ pieces of content on our website. So, we need a sophisticated and easy-to-use way to navigate to the content.

Our library is powered by search technology that uses Natural Language Processing (NLP) and Machine Learning. Natural language — allows computers, and thus our search technology to process natural language by understanding the meaning behind the words” — digesting our data in a “human” way, giving the user the best search experience. (Inbenta)

We have a dedicated linguist and team that monitors our Allegion lexicon to make constant updates.

The more you search, the better the results get!

You can search in multiple ways

Search Bar

- It works like Google, the more specific you are, the better your results will be.
- After submitting your search, you can also narrow the results more by selecting filters.

Filtering:

- You can narrow your results by source, document type, brand, and product category

What else

- ALL Allegion documents are available in the new library.
 - In the beginning, you may to search a couple of different ways in order to find your document.
- The most popular documents will appear on the library homepage.
