

Dear ISONAS Customers:

As we begin the new year, we have a few exciting announcements to share. Following the acquisition of ISONAS by Allegion, the product and engineering teams have been working hard to combine the strengths of both organizations and provide a complete ecosystem solution across the Schlage and ISONAS brands. Out of that work, you'll see new hardware and software launches early in 2021 that will allow you to extend the overall access control footprint in the customers you serve and manage them from a single software solution, Pure Access.

---

## **Launch Announcements:**

### **Pure Access Cloud Version 4.0**

- Coming soon, we plan to launch a newly updated version of Pure Access Cloud. In this update you will see a completely revamped user interface and workflows. All sites will be migrated to this new version on the release currently planned for this quarter. We will communicate official dates as we get closer.
- Features include:
  - **New look and feel.** The same capabilities and functions exist, but with new selection icons that are more streamlined and create more standardization across the app.
  - **Improved views.** Calendarized schedule views allow you to see all schedules, events and holidays in a calendar format.
  - **Customizable dashboard configuration.** We have updated the 3x1 dashboard view to be completely customizable up to a 3x4 single panel view. You can continue to have the 3x1 view with history on the bottom and individual panels on top, and can customize as well.
  - **Easier search and filter.** Simpler filtering and search capabilities on each page to find what you're looking for faster.

**To support this new release, we are offering multiple training sessions prior to the release date.**

Training will be offered free of charge and will provide an initial look of the new software interface and provide the tools and understanding of the upcoming software updates.

Additional information will be sent in February with times and dates for the training sessions.

Please be on the look-out for these and save the dates!

## **Schlage RC Reader Controller**

- The new Schlage RC utilizes the patented all-in-one reader and controller capability ISONAS pioneered years ago and marries it with the Schlage reader family.
- Features include:
  - Real time connectivity; local mode feature allows readers to function without a connection to the network. This results in faster user response times, less network traffic and reduced host system loading.
  - Mullion, wall mount and wall mount with keypad form factors.
  - Supports 125 kHz proximity, 13.56 MHz smart technology, 2.4 GHz Bluetooth and Near Field Communication (NFC).
  - Credential parity standard with Schlage MTB mobile enabled multi-technology readers and Schlage mobile enabled wireless locks; ISONAS credential parity is a factory orderable option.

---

## **What about existing products?**

### **Pure Access Manager**

- A release focused on customer experience is currently in the works for PAM. Pure Access Manager will continue to support the RC04 and IP-Bridge products, but it will not support the new Schlage device ecosystem.

## **ISONAS RC-03**

- With the launch of the new Schlage RC, the RC-03 has officially reached its end of life, effective December 31, 2020. Any extended hardware warranty purchases will be honored through 2021.
- ISONAS RC-04 is backwards compatible with the RC-03 and therefore is an appropriate upgrade with the use of an adapter cable.
- All RC-03s will continue to work and operate in Pure Access cloud and manager.
- ISONAS will continue to provide support for the RC-03 in Pure Access through the end of 2022.
- RC-03-PRX and RC-03-PRX-K will move into a "while supplies last" inventory mode. Please contact your local ISONAS Sales Consultant if you have a need. The final buys must be made before March 31, 2021.

## **ISONAS RC-04**

- The RC-04 will continue to be part of our product portfolio and can be ordered as usual and added to existing sites or specified for new job installations.

## **IP-Bridge (IPB)**

- The IPB 2.0 continues in the product portfolio and will serve to convert panel systems to IP solutions and connect existing readers to Pure Access.

## **ISONAS Pure Mobile**

- The ISONAS pure mobile credential app will continue to provide mobile access to the RC-04, and R1 readers. The ISONAS pure mobile credential app is not compatible with the new Schlage RC, the Schlage Mobile Access Credential will provide mobile access to the Schlage ecosystem. Contact your ISONAS sales rep with any questions.
