

RC-04 Firmware Release Notes 5/5/2021

Coldfire v78.01

- Added additional safety checks around the queuing of large database erase requests and protection for use of uninitialized variables in associated error paths
- Addressed a rare issue that can result in an infinite bootloop on startup due to an unhandled exception in initialization code
- Activate the Watchdog Timer after receiving the CSC Command and during queued CSC actions to address a reset condition on large database clears
- Activate the Watchdog Timer during database reinitialization error paths to avoid bootloop issues in sites with large databases
