Falcon AX option requires only 5 lbs of force to operate

Falcon recently introduced its new AX option, which is able to meet all of your Grade 1 needs while only requiring five pounds of force to operate. Best of all, the new Falcon AX device option delivers code compliance at an affordable price, bringing unbeatable value to the industry.

The AX was born out of a need to provide the market with a solution that meets the 2010 ADA Standards for Accessible Design (Chapters 404.2.7 and 309.4). These standards state that the force required to activate operable parts shall be five pounds maximum. Subsequently, the 2013 California Building Code (Chapter 11B-309.4) adopted virtually identical requirements that went into effect January 1, 2013.

Falcon AX Options
The AX option is available in a variety of options and functions with the Falcon exit device families:
- Falcon 25 Series
- Falcon 19 Series

The Falcon AX option is also available on our surfaced and concealed vertical rods, providing a two-point solution when required.

Learn more about the AX 25 Series and AX 19 Series specifications, including device types, functions, finishes, rod and electronic options and more.

Code compliant
The AX is subject to Allegion’s standard testing to ensure it meets high standards for durability, use and functionality.
- Meets 2010 ADA Standards for Accessible Design (Chapters 404.2.7 and 309.4)
- UL Certified 2013 California Building Code (Chapter 11B-309.4)
- ANSI/BHMA Grade 1 Certified
- UL Listed Panic and Fire Hardware

What the AX means to you
- Assurance that you are specifying a product that’s been thoroughly tested to meet the ADA standard as well as California Building Code’s new code requirements
- Risk minimization of project delays, liability, lost time and money due to having to re-specify an opening
- Affordable accessibility option for both new construction and retrofits
