Product profile

Schlage Electrified ND

One of our most popular mechanical locks just got even better, thanks to its updated electrified option! The Schlage Electrified ND is ideal for both perimeter and interior security in high-traffic, high-use areas. When paired with a card reader, this wired electrified lock integrates with an access control system for greater and more controlled security.

Architects—and their teams on the job site—will like the Schlage Electrified ND for a number of reasons:

- **Quiet operation:** The lock is the perfect choice for environments where noise needs to be contained or reduced.
- **Power- and cost-savings:** The Schlage Electrified ND pulls only 0.23 amps, allowing up to 8 locks to be connected to one power supply. Not only does this save power and costs, but it's better for the environment—something clients appreciate as well.
- **Flexibility:** There are a number of features that make installation faster and the lock more versatile for different types of openings. The lock auto-detects the voltage you give it, and you can add on the request-to-exit feature at any point. Plus, you can change from EL to EU mode with a simple switch on the chassis.
- **No hot levers:** With only a holding current of 10mA, there are no concerns about “hot levers” in electrically locking applications.
- **Quicker connection:** The ND Series electrified cylindrical lock comes standard with Allegion Connect, a factory-installed Molex connector system that utilizes quick-connect harnesses and hinges for simplified installation and maintenance.
