Watch your adventurous architectural ideas unfold into exciting reality with the Brio range of sliding and folding door hardware.

Brio is passionate about shaping the spaces in which people live, work and play. With subsidiaries in the UK and USA Brio is recognized by architects worldwide as a leading design and manufacturing company.

Brio’s R&D department brings a strong design element to the business, developing and testing ground breaking concepts that continue to be at the forefront of the industry.

So it’s no surprise our name Brio translates to Energy, Spirit and Vitality – the core values that drive us to always discover new solutions for our customers. We are committed to the continuous improvement of quality.

Brio, part of the Allegion family of brands.

Single Run

Top hung straight sliding architectural systems for panels up to 770 lbs (350 kg)
Single Run 80 and 100

Brio’s Single Run 80 and 100 systems are designed for interior and exterior sliding shutters and doors up to 175 and 220 lbs (80 and 100 kg) in weight for residential or light commercial applications. These systems are suitable for single panels sliding to one side or two panels bi-parting in a single run of track. Alternatively, panels can slide parallel to each other to suit almost any configuration.

The compact structural aluminum 100 track can be top-fixed through the track or side fixed using the Brio stainless steel face fixed mounting brackets for single or double track runs. The 100 track profile ensures the wheels cannot disengage and serves to reduce the risk of contamination as debris is less likely to accumulate on the raised rails. The track is available in 25 micron clear anodized aluminum for improved corrosion performance.

Single Run 80’s glass reinforced nylon hanger body with stainless steel fixing plate and hanger bolt ensures long life and high corrosion resistance. Single Run 100’s cast alloy hanger body offers improved performance for heavier panels and is also available with stainless steel fixings. Both hangers use four wheels with reinforced nylon tires, which are available with a choice of chrome or stainless steel high-speed precision bearings. This combined with the unique 100 track profile offers years of silent, smooth operation and superior rolling performance.

The hanger and fixing plate allow simple height adjustment by tightening or loosening the hanger bolt. The hanger plate also features two anti-slip tabs to prevent the door from disengaging from the hanger bolt. A comprehensive range of bottom channels and guides are available to suit a wide range of applications.

Both systems are designed to operate with Brio’s soft close device for panels up to 220 lbs (100 kg). The neat design allows the device to be housed inside the track, ensuring minimum clearances between track and panel are maintained.

Note: The Soft Close is available for Zero Clearance 80 and 100 and Single run 80 and 100 systems. See page 7 for more detail.

**Soft Close 100**

Brio's new Soft Close accessory is available for Single Run and Zero Clearance Wood and Glass for panels up to 220 lbs (100 kg). Our Soft Close works with the 80 series and 100 series hangers. The neat design allows the device to be housed inside the track ensuring minimum clearances between track and panel are maintained.

The Soft Close is easy to install and simple to operate as the spring and damper work together to control the panel. The mechanism catches the moving door and reduces its speed before retracting it towards the jamb, ensuring a quiet and soft stop every time. This reduction in speed also means little fingers are kept safe from slamming doors.

**Single Run 80 hanger shown**

- Clip fixed inside track
- Hanger, not included in soft close accessory
- Soft close mechanism houses spring and damper
- Fixing screw
Single Run 120

The Brio Single Run 120 system is designed for interior and exterior sliding shutters and doors up to 265 lbs (120 kg) in residential or light commercial applications. It uses four nylon tired, chrome or stainless steel high-speed precision bearings for smooth operation. The 120 series’ cast stainless steel hangers make it a durable solution for high traffic applications with impressive corrosion resistance.

There are several dedicated hangers to suit a wide range of applications and door constructions, such as wood, aluminum or MDF. Each hanger has been designed for simple installation and ease of adjustment. A comprehensive range of bottom channels and guides are also available.

The system is suitable for a single panel slid to one side, or two panels bi-parting in a single run of track. The 120 track can be soffit-fixed through the top, or side-fixed using Brio stainless steel face-fixed mounting brackets for single or double track runs. In addition, our 120 track is available in 25 micron clear anodized for improved corrosion performance.

Our new 120R track is suitable for internal applications for easy integration with ceiling tiles. 120R is available in 15 micron clear anodized aluminum.

The Brio Single Run 180 is the most versatile of all the Brio straight sliding systems. The 395 lbs (180 kg) panel capacity can accommodate large panels. For example, an aluminum framed panel 98 ⅞" x 98 ⅞" (2.5 m x 2.5 m) with ⅜" (10 mm) thick glass can slide on a single track or parallel to another. Single Run 180 is suited for both internal and external residential, commercial, and light industrial applications.

Brio’s straight sliding architectural systems are designed to exceed customer expectations. Cast marine grade 316 stainless steel hanger body minimizes joints and screws while maximizing its durability. Only with cast technology is it possible to form complex shapes and introduce safety features such as anti-slip. Should a locking nut become loose using Brio hardware, the panel cannot simply slide off its hanger.

While the chrome steel bearings come standard, full stainless steel bearings are available as an optional upgrade. Full stainless steel bearings are an ideal choice for exposed applications.

The 180 series is a versatile solution, with hangers to suit heavy wood, aluminum, and metal doors. Options are also available for corner, top fixing, or bolting through angles and box sections. The track can be soffit-fixed through the top, or side-fixed using Brio cast stainless steel, face-fixed mounting brackets for single or double track runs.

The 180 track is available in 25 micron clear anodized aluminum for improved corrosion performance. A comprehensive range of bottom channels and guides are available to suit a wide range of applications.

Single Run 350

The single run 350’s structural aluminum track with 1/8" (3 mm) wall thickness enables Brio architectural systems to support panels weighing up to 770 lbs (350 kg). Brio Single Run 350 is ideally suited to large openings in residential, commercial and industrial interior or exterior applications.

To accommodate these higher loads, the wheels used in Single Run 350 increase in size. Like all Brio Single Run systems, the combination of precision bearings, nylon tired wheels and our unique track profiles offer quiet finger-tip control.

Brio Single Run is designed to be discrete which is why our square track is ideally shaped for recessing into the ceiling line. Two parallel track seal grooves locate brush seals that hide the hanger bolts and brackets, while providing sound reduction. The track can be soffit-fixed through the top or side-fixed using Brio stainless steel face-fixed mounting brackets for single or double track runs.

The 250 track is available in 25 micron clear anodized aluminum for improved corrosion performance. A comprehensive range of bottom channels and guides are available to suit a wide range of applications.

Zero Clearance

Top hung straight sliding architectural systems for panels up to 770 lbs (350kg)
Zero Clearance Glass

80, 100 and 120
(Panels up to 175, 220 and 265 lbs)

Open plan interiors allow daylight to flood rooms, which would otherwise be limited to only dull ambient or harsh task lighting in homes and offices. Privacy and acoustic insulation are important in many day to day activities, which is why Brio’s Zero Clearance Glass provides the perfect balance of open plan benefits with the practicalities of room dividers.

Glass panels bring a new dimension to minimalism, which is accentuated with our virtually invisible 1/8” (2.5 mm) clearance between glazing rail and track. The clean lines achieved by concealed hardware and low profile glazing rail allow the panel to appear as if suspended between floor and ceiling.

180
(Panels up to 395 lbs)

For larger applications where panels need to move effortlessly, use our higher rated Brio Zero Clearance Glass to encapsulate a space or to expand a room. Whether open or closed, glass panels are unobtrusive and allow life to flow in all environments.

An adjustable guide and versatile fittings allow 3/8” and 1/2” (10 mm and 12 mm) tempered glass panels to be accommodated by the same hardware for up to 395 lbs (180 kg).

Note: The Soft Close is available for Zero Clearance 80 and 100 and Single run 80 and 100 systems. See page 7 for more detail.
Zero Clearance Wood

80, 100 and 120
(Panels up to 175, 220 and 265 lbs)

When screened privacy or the desire for a visually impactful panel is preferred, Brio Zero Clearance Wood can create flexible office and living spaces.

The new Brio 120R track allows a seamless application in commercial office and retail fit-outs as the extruded track has side rails, which support and dress the edge of ceiling tiles.

180 and 350
(Panels up to 395 and 770 lbs)

If sliding an access door, a room dividing wall, or even artwork, Brio Zero Clearance Wood will work smoothly. Panels can reach an impressive 129 7⁄8” (3.3 m) high and 2.5 m (98 3⁄8”) wide while appearing to float between floor and ceiling.

For applications up to 770 lbs (350 kg), concealed hardware achieves clearances of 1⁄8” (2.5 mm) between track and panel. The comprehensive Brio range of bottom channels and guides provides several options to extend the minimal zero clearance effect.

Note: The Soft Close is available for Zero Clearance 80 and 100 and Single run 80 and 100 systems. See page 7 for more detail.

1 25 equals Architectural Class I, 15 equals Architectural Class II

2 Standard lengths are available on all models
Open Rail

Top hung straight sliding architectural systems for panels up to 330 lbs (150kg)
Open Flat Bar Rail – Wood

Brio’s new flat bar system for their open rail range offers a barn door solution for panels up to 175 lbs (80 kg) in weight and 49 ¼” (1.25 m) in width. This easy to install system uses a precision bearing and nylon tire, which rolls smoothly over a flat bar rail. The face fix straps and rail are available in stainless steel with a brushed satin finish or in mild steel with a textured, matte black powder coat.

Standard kits include length of rail, hangers, door stops, and guide for single panel applications. A joining bracket is available to dress bi-parting applications where two door systems are used.
Open Round Rail – Wood Face Fix

Brio's Open Round Rail system offers face fix hangers for wood panels 1 9⁄16" (40 mm) thick and up to 220 lbs (100 kg) in capacity. The 304 stainless steel rollers utilize a sealed precision bearing with inlaid tire, which runs on a stainless steel, round rail. This centralizes the panel and conceals the support brackets.

Open Round Rail Wood and Glass systems are available in PVD black finish or brushed stainless steel. PVD black offers a contemporary aesthetic without introducing the risk of finish deterioration like powder coat can.

These systems are supplied with heavy duty door stops, but can also operate with our soft stop accessory for either the left or right hand side of the opening. The soft stop performs as a damper, which absorbs momentum of the door to produce a softer and quieter operation when opening or closing the panel.
Open Round Rail – Wood Top Fix

With easy installation and exposed rail design, the versatile top fix system is suitable for wood panels in the home or office. Our sealed precision bearing and nylon inlaid tire ensures the 304 stainless steel rollers will operate smoothly and quietly for years to come.

An array of bottom guide options make the Brio Open Round Rail Wood systems suitable for any application for panels up to 220 lbs (100 kg). Open Rail Wood guide options are shown on page 39.
Single Run

Zero Clearance

Open Rail

36 • Brio • Sliding and folding door hardware
Open Round Rail – Glass

Frameless glass panels create a timeless style suited to today’s minimalist trend. Whether in an office space or bathroom suite, Brio’s Open Round Rail Glass will enhance a minimalist appearance with 304 stainless steel strap fixings and exposed rail design. The soft stop accessory and PVD black finish are also available, making this system even more desirable.

The universal stainless steel guide is suitable for tempered glass panels of $\frac{5}{16}$", $\frac{3}{8}$" and $\frac{1}{2}$" (8, 10 and 12 mm) thick, up to a capacity of 220 lbs (100 kg). The stainless steel round rail and sealed precision bearing with nylon inlaid tire will perform effortlessly every time.

Open Square Rail – Wood

The heavy duty industrial appearance of the Brio Open Square Rail Wood will suit any contemporary interior and with capacity of 330 lbs (150 kg) and panels at 78 3⁄4" (2 m) wide. Exposed precision bearings and 304 stainless steel strap fixings offer a unique industrial aesthetic, which is in high demand for residential and commercial applications. The Open Square Rail Wood system is also available in PVD Black, making it a true stand out product.

Multiple guide options allow these large panels to operate with or without a floor channel and so interiors are enhanced with uninterrupted flooring. Long life cycle and quality performance are assured with this robust system whether used in a rustic interior or modern workplace.
