Leverage biometric technology to decrease labor costs and drive up revenue

In an industry challenged by complicated ACA reporting requirements, lower Medicaid payments, higher liability costs, and decreasing profit margins - LTC facilities need innovative ways to drive down costs, while maintaining their quality of service. Biometric time and attendance solutions from Schlage® enable nursing facilities to manage staff more efficiently, while removing administratively cumbersome paper-based processes.

Manage labor costs and increase profits
For nursing home facilities, labor represents a substantial portion of their overall spend. Couple this with the Center for Medicare and Medicaid Services (CMS), new Payroll Based Journal (PBJ) system reporting requirements, Medicaid cuts, and patient litigation - LTC facilities are hard-pressed to find solutions that enable them to cut expenses, while increasing patient satisfaction and profitability.
Schlage’s leading-edge time and attendance solutions replace traditional time card systems that are wrought with problems such as:

- Buddy punching
- Unreliable paper-based processes
- Machines that break down regularly
- No integration into payroll systems
- Lack of visibility by management into payroll

With biometric time and attendance solutions, all of these challenges virtually disappear. Schlage’s HandPunch® leverages biometric technology to capture an image of an employee’s hand each time they clock in. Rather than capturing finger or palm prints, the system reads the geometry (size and shape) to verify an identity. Employees simply type in their employee number, and place their hand in the unit for verification.

HandPunch systems communicate over Ethernet, modem and/or direct serial connection, enabling simple consolidation of time and attendance data over multi-unit operations. Whether your LTC facility has 25 users or over 30,000 users, there is a HandPunch solution that will fit everyone’s unique needs.

**Benefits**

- Eliminate buddy punching and time theft
- Remove need for badges
- Gain precise labor data and optimize staffing
- Reduce back-office processing with integrated applications
- Solutions for any size nursing facility
- Increase patient satisfaction
