

# M Collection

## Ergonomic levers

Door handles, as ubiquitous as they are, have in large part become graphic expressions for the architecture. But while specifications are often made based on the silhouette of that specific form, little thought is given to the experience of that interaction. The ergonomic levers of the M Collection changes this paradigm. Ergonomics, design and experience were considered as one instead of at the expense of the other. How we engage the door and from where we approach door, coupled with the needs of an active aging population, were all factors considered, resulting in an all new experience.

### ME1 ergonomic lever

Designed to be soft to the touch from every angle, the ME1 uses gentle curves that contour with the hand for easy actuation. The end of the handle flattens horizontally as it approaches the door, providing a paddle-like surface that - because of its distance from the lever shaft - reduces the amount of force required to open the door.

### ME2 architectural ergonomic lever

The ME2 is an architectural interpretation of the ME1 design. A linear, minimalist style integrates into modern aesthetics while delivering the same comfortable, ergonomic and efficient use.

### ME3 easy access lever

The slightly larger scale of the ME3 addresses the needs of the growing active yet aging population. The thicker lever diameter allows easy grasping by arthritic hands, while a lever offset angle positions the large grip surface in a way that reduces actuation force.

The M Collection ergonomic levers suite across the Schlage® L Series mortise lock and multiple Von Duprin® exit device series in several finishes

#### Schlage L Series mortise

- L mechanical lock
- L wired electrified lock
- LE wireless electronic lock
- LM9200 two-point lock
- LM9300 three-point lock
- LT tubular lock

#### Von Duprin exit devices

- 33A/35A Series for narrow stile doors
- 94/95 INPACT™ low profile device
- 98/99 Series for wide stile doors

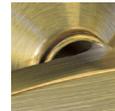

#### Finishes
