A: Mark the corners of the deadbolt with crayon or grease pencil. Retract deadbolt and close door. Throw deadbolt firmly against jamb to transfer markings.

B: Bore 1” diameter hole 1⅛” deep, centered between the markings. **Caution:** Deadbolt will not function correctly if hole is too shallow.

C: Place strike on jamb, centering over hole and parallel to edge of frame. Mark outline and remove strike.

D: Chisel cutout ⅜” deep.

E: Install strike with screws provided. Put 3” long screws closest to door stop. Predrill ⅛” diameter holes. Lubrication of screws recommended.
