Specifications

Case Dimensions:
6½"L x 1¾"W x 1¾"D

Electrical:
Voltage: 5-12VDC (reader)
12-24VAC/DC (controller)
Current (max): 120mA

Relay Contacts:
Main Relay (controller): 2A
Aux Relays (controller): 1A
Bell Relay:
Form A; 1 Amp @ 30VDC;
500mA @ 125VAC

Environmental:
-20° F to 130° F

Features

- Vandal Resistant Case
- Sealed for Indoor or Outdoor Applications
- LED's for Relay Status Indication
- Bell Output
- Surface Mount
- Illuminated Hardened Keys
- Rated for Greater than One Million Key Cycles

Applications

- Low to Medium/Heavy Traffic Areas
- Rough Service Environments
- Mullion Frame Mounting
- Dimly Lit Areas

Description:
The KP232 Access Control unit consists of two pieces: an SSWiLM keypad front end and a 232 Access Control Module. Schlage’s Door-Gard Series SSWiLM keypad combines elegant looks with a mullion mount design in a rugged, vandal resistant case, which you can use for almost any application. The SSWiLM has hardened backlit keys designed to perform in medium to high traffic areas and in rough duty environments. The electronics are also conformal coated, which makes the keypad suitable for indoor or outdoor applications.

Basic Operation:
To gain access through the door enter your code (1-6 digits) followed by the ★ key on the keypad.

Packing List:
(1) SSWiLM Keypad
(1) Schlage 232 Controller
(1) Eight-Conductor Wire Harness
(4) Three-Conductor Wire Harness
(1) Controller Hardware Pack
(1) Mullion Hardware Pack
(1) ⅝" Allen Wrench
(1) Anti-Oxidant Grease Pack
(1) Installation/Programming Manual
(1) Self-Contained Access Control Programming Guide

Wire Harness Configuration:

Wiring Requirements:

18 AWG – 1000 Ft.
20 AWG – 500 Ft.
22 AWG – 250 Ft.
Keypad Installation Procedure:

1. Drill through the back plate using a \( \frac{11}{64} \)" bit. Use the template on the back page to accurately mark the mounting holes before drilling. Then drill the mounting holes with a \( \frac{9}{64} \)" drill bit. Also drill the hole for the wires. This may vary depending on the number of conductors required.

2. On the keypad end, strip back the insulator from the wire and tape the drain wire (shield) to the jacket. Now connect the required wires to the 8-conductor wire harness provided. The wire harness plugs into the 8-position connector on the keypad. At the other end of your wire run, strip back the insulator from the wire but do not tape the drain wire to the jacket. The drain wire must be connected to ground at the controller end. See the diagrams below.

3. Finally mount the SSWiLM keypad onto the mounting surface using the provided screws. Do not over-tighten the screws, which may result in damage.

Wiring the SSWiLM to an Schlage 232 Access Control Module

The connection between the SSWiLM and the 232 Controller requires a 4-conductor, stranded wire with overall foil shield. The 8-conductor wire harness from the keypad connects to connector P6 on the controller. Connect the wires, color to color (red to red, black to black, white/black to white/black and white/yellow to white/yellow). Refer to the wire lengths on the first page. As mentioned above, the drain wire must be attached to Ground on the controller side, which is the V- terminal or negative of your power supply.
**Basic Access Control Using an Electromagnetic Lock (Maglock)**

- Normally Open REX Device
- White/Orange
- Brown
- V+ V- NC C NO

**Maglock**

- 12-24 DC

Schlage recommends a filtered and regulated DC power supply.

**P5 Voltage Selection Jumper**

- 12-15VDC: pins 2 & 3
- 15-24VAC: pins 1 & 2
- 12-24VAC: pins 1 & 2

**Basic Access Control Using an Electric Door Strike**

- Normally Open REX Device
- White/Orange
- Brown
- V+ V- NC C NO

**Strike**

- 12-24 AC/DC

Schlage recommends a filtered and regulated DC power supply.

**P5 Voltage Selection Jumper**

- 12-15VDC: pins 2 & 3
- 15-24VAC: pins 1 & 2
- 12-24VAC: pins 1 & 2

If you aren’t using door contacts you must short the white/orange and white wires.

Schlage recommends a filtered and regulated DC power supply.
Schlage recommends a filtered and regulated DC power supply.
Wiring the Bell Output to a Speaker:
The SSWiLM keypad has a built-in bell button, which triggers a relay output when pressed. This relay is normally open and the contact closes when triggered. You can use this relay output to trigger devices that require a momentary closure, such as a doorbell. The relay output provides a dry contact, but you can run up to 24 VDC or 125 VAC through it for devices that require power to operate. The diagram below shows these connections.

Keypad Mounting Height
Mounting height can vary depending on requirements. An appropriate range is typically between 48 and 52 inches on center off the floor.
Programming the SSWiLM Keypad
The SSWiLM keypad has its own local programming options. All user codes and other access control features are programmed into the controller. Refer the Self-Contained Access Control Programming Guide for those features. The programming options chart below shows all the programming commands available in the SSWiLM.

To program the SSWiLM you first must enter program mode. To enter program mode enter the following on the keypad: 099 # program code ★ (default program code is 6789).

Keypad Default Settings

<table>
<thead>
<tr>
<th>Option</th>
<th>Default Setting</th>

<tr>
<td>Exit Program Mode</td>
<td>Press the ★ Key</td>
</tr>
</tbody>
</table>

Testing the Keypad
After installing the keypad, Schlage recommends that you perform the keypad self-test once a year, to ensure that the keypad is working properly.

- To perform the self-test, with the unit powered up, press the following keys on the keypad: 7890#123456 ★
- If all 12 key presses are accepted, the keypad enters self-test mode.
- The LEDs alternate three times followed by the sounder beeping three times.
- When finished the yellow LED starts flickering rapidly.
- Press ★ to clear.
### LED Indications

<tr>
<td>Yellow Flashing Slowly (double flash)</td>
<td>Front End Program Mode</td>
</tr>
<tr>
<td>Yellow Momentary Flash</td>
<td>Visual Keypress Feedback</td>
</tr>
</tbody>
</table>

### Replacing the KP232m (discontinued) with an KP232

The KP232 is functionally equivalent to the KP232m keypad, which was discontinued. It’s not, however, a direct physical replacement. They are both two piece units, but they use a different control boards. It is not possible to replace just the mullion keypad portion of the unit. You must replace the entire unit. Refer to the previous sections for wiring your new KP232 unit.

### Program Mode Loopback

If you’ve forgotten the local program code use the following loopback connection to enter program mode. Power down the unit, short the wires in the configuration illustrated, then power the unit back up. The yellow LED should be flashing. Now change your local program code or reset the unit. Power the keypad down and reconnected the wire harness in the original configuration.

![Loopback Diagram](white-yellow-to-blue-and-brown)

### Warranty

Schlage Lock Company (Schlage) warrants its products to be free from defects in material and workmanship when they have been installed in accordance with the manufacturer's instructions and have not been modified or tampered with. Schlage does not assume any responsibility for damage or injury to person or property due to improper care, storage, handling, abuse, misuse, normal wear and tear, or an act of God.

Schlage’s sole responsibility is limited to the repair (at Schlage’s option) or the replacement of the defective product or part when sent to Schlage's facility (freight and insurance charges prepaid) after obtaining Schlage's Return Material Authorization. Schlage will not be liable to the purchaser or any one else for incidental or consequential damages arising from any defect in, or malfunction of, its products.

Except as stated above, Schlage makes no warranties, either expressed or implied, as to any matter whatsoever, including, and without limitation to, the condition of its products, their merchantability, or fitness for any particular purpose.
The Schlage keypad is designed for surface mount applications. You must drill a $\frac{7}{8}$" hole for the wire harness connector, as shown, so the unit is flat against the mounting surface.
