Note: Check with factory for retrofit applications.

1. For lock or device preparation, see their directions. Also see application schedule below.

2. Prepare door for strike (see other side).

3. Wire strike (Figure 1). (Switches on 6121DS only.)

4. Test strike: Apply solenoid power. Fail secure (FSE) lip unlocks. Fail safe (FS) lip locks. Figure 1 shows status of switches.

5. Install strike with two #12-24 screws. Make sure clearance between latch bolt and strike lip is 1/32" (Figure 2). If not, uninstall strike, adjust (Figure 3), and reinstall.

6. If latch bolt does not extend far enough to actuate tripper, install extension (Figure 4). (Tripper on 6121DS only.)

7. Test door: With strike unlocked, door opens with latch bolt extended. When door closes, latch bolt rides over strike lip.

Solenoid Power Requirements

Yellow solenoid wires = 12 VDC, 0.57 A
Black solenoid wires = 24 VDC, 0.29 A
(also shown on strike label)

Application Schedule

3/16" ref. X

5/16"

Line X-X corresponds to line X-X on device template

"B"

A

1/32"

B

C

To adjust strike, loosen screws A, B, and C and move backbox sideways as necessary

NOTE:
Static Strength Rating 1500 lb.
Dynamic Strength Rating 70ft.-lb.
Endurance Rating 250,000 c.
