1. Apply template and prepare door per template. (RH shown; LHR opposite.)

2. Install rim cylinder (key removed). Cut down screws if necessary.

3. Cut cylinder tailpiece.

4. Remove screw. Use Phillips screwdriver to rotate cross slots so marks align.

5. Remove cover screws and covers (shipped with one screw in each cover).

6. Mount center case to door. Level device before tightening screws.

7. With device level, mark and drill hinge side mounting holes using device as template. Install hinge side mounting screws.

8. Install strike with two screws as shown.

9. Cut and remove cable tie to release pushpad.

10. Remove cylinder bracket.

11. Peel backing from adhesive strips on sign. Install sign as shown.

12. Install cylinder in cylinder bracket. Cut cylinder tailpiece if necessary.

13. Use Phillips screwdriver to rotate cross slots inside center case so marks align.

14. Install cylinder bracket and cylinder. Make sure cylinder tailpiece engages cross slot in center case. If tailpiece is recessed (see Step 12), use tailpiece extension. Make sure to install screws as shown. Install 9 volt battery and attach battery clip.

15. Install center case cover. Use long screws where shown for tamper resistance. Depress pushpad to install hinge side cover.

16. Close door and turn key 360 degrees each way. If dead bolt binds in single door strike, adjust strike as shown. Tighten screws. Prepare lockdown holes and install two lockdown screws as shown. Test device (see “Testing” on back of “Parts List”).
