**ALLEGION US™, KERI SYSTEMS EXPAND ACCESS CONTROL OFFERING IN
MULTIFAMILY MARKET**

Schlage® NDE, LE Locks Now Integrate With Keri Systems To Offer No-Tour Capabilities

CARMEL, IND. (August 21, 2018) – Allegion US™, a leading provider of security products and solutions, announced the latest version of the Keri Systems' software now supports Schlage® locks in no-tour mode.

The supported locks, which include Schlage Control™, NDE and LE, are ideal for multifamily property managers looking to retrofit their existing properties with electronic access control on individual apartment spaces. This provides more security, eliminates unnecessary expenses around managing traditional keys and offers an enhanced tenant experience with ID card or phone access. These are also excellent options to consider for common areas within the building such as meeting rooms, recreational areas and laundry rooms.

“Allegion strives to offer solutions that keep people safe and give businesses peace of mind,” said Robert Gauden, Allegion project-based business leader, electronic access control. “Schlage offers a complete multifamily solution, and having Keri Systems come on board with their easy-to-use software is a win for us and our customers.”

This new capability of the Keri software makes it an ideal solution for managing all aspects of a multifamily property, from exterior doors and parking gates to resident doors and common areas. Keri's intuitive software is a choice solution for companies looking to enhance their security on a platform that requires minimal training.

“With the added no-tour capabilities, we now offer the ability to manage Schlage locks in RS-485, Gateway and Wi-Fi Direct modes,” said Vince Deiliis, director of marketing and national accounts for Keri. “We pride ourselves on being able to show our dedicated support to this powerful and flexible locking solution.”
