ALLEGION, RS2 TECHNOLOGIES EXPAND OFFERING OF ELECTRONIC ACCESS CONTROL SOLUTIONS
IP-Based Solution Provides Scalable, Cost-Effective Security Option

CARMEL, IND., (April 8, 2019) – Allegion, a leading provider of security products and solutions, announced its ENGAGE® IP Gateway integrated with the latest version of RS2 Technologies' Access it! Universal.Net software. RS2 Technologies released Version 7 of its software on March 11, which enables it to support Schlage Control™, Schlage LE™ and Schlage NDE™ wireless locks as well as the Von Duprin® Remote Undogging (RU) and Remote Monitoring (RM) options via the ENGAGE IP Gateway.

"Allegion is excited to grow our offering with RS2 Technologies and provide end users more flexibility when it comes to electronic access control," said Robert Lydic, VP of PACS/ OEM Business at Allegion. "This IP-based integration gives our customers the scalable and cost-effective options they need. By completing this integration and incorporating our new Von Duprin RU and RM kits, the opportunities for the RS2 community have been expanded significantly."

The R2 Technologies' integration with the ENGAGE IP Gateway eliminates the need of an access control panel, which enables customers to grow the number of access control secured doors while maintaining their budgets.

The ENGAGE Gateway provides the ability to leverage existing IP-based infrastructure for maximum efficiency. Ethernet connectivity to the network enables real-time access control directly from an in- or out-of-network host to an edge device. To further simplify installation, the Gateway can be powered over Ethernet (PoE), removing the need for separate power supplies or wiring. The ENGAGE Gateway performs regular, frequent communication between the Gateway and linked ENGAGE enabled devices. The Gateway is able to send commands such as lock and unlock from an IP host in real-time. Commands are executed in less than five seconds. As an Internet of Things (IoT) device, the Gateway leverages network security practices, including AES-256 bit and TLS encryption, to provide customers with secure, dependable experiences.

RS2 customers were already able to utilize its Access it! Universal.Net with the Schlage NDE, LE and AD Series locks. This integration of the new software with the ENGAGE IP Gateway will further support the Schlage LE and NDE locks, and it adds the Schlage Control and Von Duprin perimeter security solutions to the offering.

"In addition to expanding our scalable, flexible solutions for our integrators and end users, the ENGAGE IP Gateway integration allows us to deepen our support for specific verticals," said Jeff Bransfield, national sales manager at RS2 Technologies. "We've seen demand from the multifamily housing market for the Schlage Control locks. And the Von Duprin RU and RM options are an excellent fit for the education market and larger venues. Adding these to our portfolio through the IP-based integration will help us better serve our customer bases."

The Schlage Control Smart Deadbolts offer highly scalable, efficiency-boosting capabilities so that multifamily properties can focus on operating more profitably—and with greater appeal for residents. Property managers can configure and manage access from virtually anywhere and moving to smart credentials eliminate the costs and hassles of managing keys.

The Von Duprin RU and RM options expand the reach of the access control system to perimeter openings beyond main entrances. The Von Duprin RU option retrofit kit for exit devices is a cost-effective solution that enables remote locking (undogging) for centralized lock down and door status monitoring. The RM option is a sensor-only configuration for exit only or fire rate doors that require monitoring.

Version 7.0 of Access It! Universal.NET, an industry-leading access control solution, continues to deliver a complete access control solution at an unsurpassed value. Access It! Universal.NET Version 7.0 is built with a focus on interoperability, security and scalability. New features include expanded support for leading hardware solutions, destination dispatch, expanded reporting and filtering, QR codes for badging and operating modes for enhanced system control and flexibility.
